Team Player - Autonomous - Curious - Keen to learn - Efficcient - Mediator

Work Experience (8 years and 9 months)

2016 - Astek contractor for SNCF (National Railways) — *Lyon, France*

IT ARCHITECT — *current employment, 1 year and 2 months*

In the HR department as Architect, I conducted architecture reviews, challenged the client's suppliers on their proposals, presented projects to the architecture review board, justified the non-standard technologies or architectures when needed. As architect, my task is to accompany all HR teams on all kinds of projects, from emergence, to RFI, build, deployment and even helping in investigating issues during the run, to achieve this I leverage my technical knowledge but also guide the teams through the client's processes to help them achieve their goals.

INTEGRATION MANAGER AND ASSISTANT PROJECT MANAGER — *1 year and 5 months*

In the IT production department, in charge of preparing for the deployment of an ambicious program aiming to revamp all of the "traveler's information". I managed the relationship with both the clients of the IT production department and it's suppliers. I acted as tech-lead for the team of integrators, and took part in re-defining the organisation between all actors to plan for end-to-end supportability of the system (Cloud, network, hardware, in the train station...)

2013 - Wipro contractor for Michelin — *Clermont-Ferrand, France*

PROJECT MANAGER — *5 years and 3 months*

Project Manager in charge of about 10 "small" projects, my role was to plan and schedule the project to achieve the business objectives. I applied and adapted both waterfall or agile methodology depending on the project and it's needs, all the while reporting to my management on current issues and alerts as well as forecasting the achievement of the client's KPIs. Management of a 4 person team. I took part in the definition of the business's roadmap for a program to build&deploy an IS for QA departments across the group.

2011 - Capgemini contractor for Lyonnaise des Eaux — *Paris, France*

CONSULTANT — *2 months*

I took part in the design and coding of a module for the PHP CMS Symfony. The goal of the module was to allow automatic configuration of advanced features of the Apache web server through a rich interface. In direct contact with the client, I was able to take advantage of my web and security knowledge to issues advices that were critical to the project's success, trespassing my role of developer. Once I completed the module's coding and testing, it's deployment was carried on by a separate team without any glitch even after I had left the project.

2010 - eDarling — *Berlin, Germany*

QA ASSISTANT — *6 months*

I took part in the building of a new QA department (from 2 to 12 persons in 6 months). The key was to implement the methodologies and processes that would guarantee sufficient Quality in the long run, but still provide immediate and tangible benefits. Management of the life cycle of bugs & releases, process of incident management. This assignment offered many challenges in this dynamic startup.
